Career Objective

Final-year Information Technology student with a strong interest in backend development. Seeking a **Fresher Backend Developer** position to apply academic knowledge in real-world products, strengthen system design skills, and contribute effectively to an engineering team.

Education

09/2022 - 02/2026 Sai Gon University
Bachelor of Information Technology
GPA: 3.38/4.0 (8.26/10)
Academic Encouragement Scholarship: 5 times

Achievements

- **2nd Place, Hackathon 02/2025 (Sai Gon University):** Built an AI-powered learning assistant using the **OpenAI API**; led backend development and delivered a working demo within 24 hours.
- **Research Paper:** *Adaptive Learning Optimization for Reinforcement Learning*, published and presented in person at **FJCAI 2026** (International Artificial Intelligence Conference 2026).
- **Graduation Thesis:** Developed an AI-integrated Moodle system and received a **10/10** final score.

Skills

Programming Languages: Java, Ruby

Frameworks: Spring Boot, Ruby on Rails, ReactJS

Databases: MySQL, Redis, MongoDB, PostgreSQL

Architecture: Microservices, MVC

Real-time Communication: WebSocket

Tools / DevOps: Git/GitHub, Docker, AWS Cloud, n8n

Projects

- 1. Internal System**

(Team Project - 5 members)

 - **Timeline:** 09/2025 - 09/2026
 - **Description:** Built an internal system for managing orders, employees, customers, and products for an e-commerce business using the **MVC** architecture and **PostgreSQL**.
 - **Key Responsibilities:**
 - Developed backend features for the order management module, supporting a workload of more than **5,000 orders per day**.
 - Implemented a price crawling and processing pipeline for e-commerce product data from large CSV files with **100,000+ rows**, using **Sidekiq** for asynchronous processing and **PostgreSQL** for storage.
 - Migrated data from two separate databases into a unified storage system, handling complex datasets with more than **500,000 records**.
 - Built an invoice information extraction tool for complex document formats, achieving **97%** accuracy by integrating the **Gemini AI API**.
 - Built an **MCP**-based automation flow and product posting bot that handled up to **1,000 products per day**, with per-product rate limiting and **create, retrieve, update** operations to improve operational efficiency.
 - **Technologies:** Ruby, MVC, PostgreSQL, Redis, Docker, AWS EC2, Sidekiq
- 2. SEO Content Automation System**

(Team Project - 3 members)

 - **Timeline:** 12/2024 - 06/2025
 - **Description:** Developed a system for automated SEO content generation, trend analysis, and website publishing.
 - **Key Responsibilities:**
 - Designed the overall system architecture and database structure for the content generation workflow.
 - Built a trend-processing and article generation pipeline using **OpenAI API** and **DeepSeek**, then published content to websites

through **Shopify GraphQL**.

- Set up **n8n** workflows and implemented real-time updates with **WebSocket**.
- Improved the daily content production workflow, achieving an article acceptance rate of about **80%** and contributing to an approximately **20%** increase in SEO traffic.
- **Technologies:** Ruby, OpenAI API, DeepSeek, Shopify GraphQL, n8n, WebSocket
