About me

Aspiring Full-Stack Web Developer with experience in building a real-time messaging platform using WebSocket. Passionate about creating efficient and user-friendly web applications, optimizing performance, and learning new technologies. Eager to collaborate with teams and contribute to innovative projects.

Education

2022 - 2026 Sai Gon University
Information Technology, majoring in Software Engineering
GPA: 3.25 Score: 8.0/10
Scholarship: 3 times (*Merit-based Encouragement Scholarship*)

Skills

Database MySQL, MongoDB, Redis	Programming languages Java, JavaScript, Python, PHP	Foreign language English: Scored 5.0 on IELTS practice test (DOL English Center)
Source version control Github	Backend technologies Spring Boot, Servlet, WebSocket, JWT, Microservices, Observe pattern	Frontend technologies ReactJS, Ant Design, JSP
Other tools Docker	Payment & Security Paypal Integration, Spring Security (RBAC)	

Achievements

- **Hackathon 2025 (Top 2) - Sai Gon University:** Developed an AI-powered learning platform that integrates mind mapping, summarization, exercises, and discussions using OpenAI. [GitHub Repository](#)

Projects

12/2024 - Present	Calligo	
	Description:	A real-time messaging and calling platform built using a microservices architecture. It supports instant messaging, voice/video calls, and real-time notifications.
	Members:	1 member
	My roles:	Designed and implemented the entire system, covering database architecture, backend logic, and frontend UI/UX. Managed authentication, WebSocket-based real-time communication, message storage.
	Technology:	
	Database:	MongoDB, Redis, MySQL
	Backend:	Spring Boot, Kafka, WebSocket, JWT, Microservices Architecture, Observe pattern
	Frontend:	ReactJS, Ant Design
	GitHub:	Backend Repository Frontend Repository

10/2024 - 12/2024	Flight Management System	
	Description:	Website for managing flight bookings, with features like easy ticket booking, email notifications, VNPAY payments, flight management, comments, Excel report generation, and secure role-based access control.
	Members:	7 members
	My roles:	Designed the database, set up the backend framework, and implemented core features such as user authentication (login/register/forgot password) with Spring Security and JWT. Developed email notification functionality, Excel export, and role-based access control.
2/2024 - 5/2024	Technology:	Spring Boot, MySQL, ReactJS, Ant Design, Docker
	GitHub:	Backend Repository
		Frontend Repository
2/2024 - 5/2024	SGU Test	
	Description	A comprehensive quiz management platform designed for teachers and students. Teachers can effortlessly create quizzes, monitor student performance, and import/export questions easily.
	Members	4 members
	My roles	Developed a dynamic question creation feature, implemented Excel question importing, handled CRUD operations, designed statistical visualization with Chart.js, and created a landing page with animations.
	Technology	Servlet, JSP, MySQL, HTML, CSS
	GitHub	Project Repository
