## About me

Self-motivated backend developer with a passion for building scalable systems using Spring Boot and microservices. Delivered a solo real-time messaging platform with microservices architecture and WebSocket integration. Quick learner with strong problem-solving skills, eager to contribute to innovative projects and collaborate with teams.

## Education

**2022 - 2026 Sai Gon University**  
Information Technology, majoring in Software Engineering  
GPA: 3.25      Score: 8.0/10  
Scholarship: 3 times (*Merit-based Encouragement Scholarship*)

## Skills

### Database

MySQL, MongoDB, Redis

### Programming languages

Java, JavaScript, Python, PHP

### Foreign language

English: Scored 5.0 on IELTS practice test (DOL English Center)

### Source version control

Git, GitHub

### Framework

Spring Boot, React

## Achievements

- **Hackathon 2025 (Top 2) - Sai Gon University:** Developed an AI-powered learning platform that integrates mind mapping, summarization, exercises, and discussions using OpenAI. GitHub Repository

## Projects

12/2024 - Present

### Calligo

#### Description:

A real-time messaging and calling platform built using a microservices architecture. It supports instant messaging, voice/video calls, and real-time notifications.

#### Members:

1 member

#### My roles:

Designed and implemented the entire system, covering database architecture, backend logic, and frontend UI/UX. Managed authentication, WebSocket-based real-time communication, message storage.

#### Technology:

##### Database:

MongoDB, Redis, MySQL

##### Backend:

Spring Boot, Kafka, WebSocket, JWT, Microservices Architecture, Observe pattern

##### Frontend:

ReactJS, Ant Design

#### GitHub:
